

Appendix J

Modeled Changes to the 100 year Floodplain

The Lead Agencies modeled flood events that meet criteria for a 100-year flood using daily average flows under the No Action/No Project Alternative condition and the Proposed Action. This appendix includes maps showing 100-year floodplain. The “With Dams 100 year” shown on the maps depicts the No Action/No Project Alternative condition and the “Without Dams 100 year” depicts the Proposed Action. All of the areas depicted on the following map are within Siskiyou County, California.
